## Symptoms and/or conditions requiring special considerations:
- **COPD**
- **Arrhythmia**
- **PAD**
- **Orthopedic Limitations**
- **Hypertension**
- **Diabetes: Type**
- **CHF**

- **Other:** __________________________________________________________________________________

(Patient may use SL NTG 0.4 mg as prophylaxis for chest pain prior to exercise or per standing protocol for chest pain during exercise.)

I have examined the above-listed patient and have determined that his/her admission into the University of Toledo Medical Center’s Cardiac Rehabilitation Program is medically necessary. I understand that it is a comprehensive program consisting of an exercise prescription, exercise therapy sessions, nutrition therapy and lipid management, and patient education regarding risk factor reduction. The patient will perform a cardiopulmonary exercise test during his/her stay in the program in order to provide an accurate exercise prescription. The patient will have a lipid profile performed. The patient’s primary care physician will be notified about the treatment plan, any problems and the patient’s progress upon completion of the program. Any limitations this patient may have are listed above.
